breaker

## Safety Breaker

The power has been tripped due to excessive use of electricity in that room, so turn off all electrical devices in the room.

Then turn the safety breaker on.

## Ampere Breaker

An ampere breaker will trip if too much electricity is used throughout the house.

For this reason, turn off all electrical appliances that you are using.

After that, turn the ampere breaker on.

If you use electrical appliances in the same way as before the breaker tripped, there is a high chance that it will trip again, so turn them on one by one to avoid using too much at once.

## Earth leakage breaker

1. Turn off all safety breakers once
2. Turn on the earth leakage breaker
3. Turn on the safety breakers one by one
4. If the earth leakage breaker trips again during the process, there is a high possibility that the circuit that was turned on at the time is leaking
5. Turn off the safety breaker of the circuit with the leak
6. Turn on the earth leakage breaker again
7. Turn on the safety breakers of the circuit other than the one with the leak
8. If you cannot determine the cause, or if it is likely due to deteriorated wiring, contact the management company and have them deal with the problem.

※Please do not use hair dryers, electric kettles, and microwaves at the same time, as this will cause the circuit breaker to trip.

## 100 yen coin slot

• Continuous coin insertion and additional coin insertion during operation are possible.

## Operating Procedure

- ① Open the door and make sure there is no other person's laundry in the drum.
- ② Spread out each laundry piece and place it into the drum and close the door.  
(When closing the door, be careful not to get laundry caught.)
- ③ Please insert a 100 yen coin. Drying will begin.  
(Opening the door will stop the dryer so you can check the drying condition. Close the door to restart the dryer.)

※This machine is for 100 yen coins only, so if you insert other coins, they will not be returned.
